

# High Security Shredders

NSA/CSS 02-01 High Security Shredders

## High Security Shredders

In order to protect our National Security, destroying confidential information is a necessity. Dahle's commitment to providing innovative, reliable shredders for the U.S. Government is the reason why we remain the preferred choice among military and government personnel. Dahle High Security Shredder are NSA approved for NSA/CSS Specification 02-01. These high security shredders are capable of reducing a single sheet of paper into 15,500 tiny particles.

These particles are so small that they have been rendered impossible to reassemble. In a world of uncertainty one thing is for certain, whatever you put through this shredder, we guarantee will never be read again.

Most Dahle High Security shredders are equipped with an automatic oiler. It provides slow, continuous lubrication across the entire cutting mechanism to reduce wear on the cutting cylinders, and ensure peak performance.

## DAHLE CleanTEC®

Dahle High Security Shredders are also available with CleanTEC® filtration. This integrated system collects fine dust particles created around the cutting cylinders, and forces them into a specialized filter on the back of each machine. This filter permanently traps up to 98% of the fine dust, and provides a cleaner, healthier work environment. DAHLE CleanTEC® shredders also include additional special features such as Safe Technology and ESP Protection.

## High Security Models

To meet all of your customers needs, Dahle offers a wide range of high security shredders. The Dahle 20 Series feature solid cutting cylinders milled from a block of German steel. The 40 Series uses the same German technology with an exciting new look and our SmartPower Energy Management System. The 41 Series (CleanTEC®) includes all of the above as well as integrated fine dust filtration.
